CONVERGED SOLUTIONS

## Stay Safe and Secure with Access Control

With access control, you can effectively keep your building safe and secure, by controlling the movement of people in and out of the building, as well as setting the criteria for people who are allowed to access the building or any particular sensitive areas.

All businesses, whether small, medium and large have assets, property and people that need protecting and Connaught can help to defend against the ever-growing threat of security risks.

Connaught's Net2 system is an advanced PC based access control solution offering centralised administration and control of sites. It perfectly tailors access privileges to groups or individuals quickly and easily using its intuitive, user-friendly software.

Event reports can be generated in a few simple clicks and the single-door architecture makes specifying, installing and maintaining the system easy. Advanced features such as site graphics, IP camera integration and 'Triggers and Actions' further extend the capabilities of this cutting-edge system, giving you total confidence that your premises will stay secure.

## Why secure your business with access control?

**Keys vs Access Control** – a cost effective alternative to the expense of replacing locks and keys. Electronic tokens are easily barred if they are lost or stolen.

**A Complete Solution** – Net2 access control integrates with many CCTV, intruder and fire alarms for great security.

**Video Entry** – gain visual verification before granting access – Net2 provides a smart, simple video door entry system.

**Wireless Locks** – a low cost solution for internal doors, Net2 PaxLock is a door handle with a control built-in, that can easily replace an existing handle.

**Energy Saving** – set the system to switch off utilities automatically when the building is empty and save money on your bills.

**Emergency Lockdown** – secure your business at the touch of a button so that only specific personnel are permitted to pass through doors during lockdown.

Our user-friendly and flexible networked access control system which is managed from a central PC offers IP door controllers that are wired or battery powered to suit any site requirements. It connects straight to an existing network with minimal wiring needed. Our one door philosophy means that you are free to simply build your system one door at a time.

### Key Features:

- PC based system
- Central control of privileges
- Manage 1000s of doors, 50,000 users
- Event reporting
- Scalable; add to systems easily
- Integrate other building systems
- Proximity, magstripe or keypads

### Typical Applications:

- Small/medium premises
- Large corporate premises
- Multiple-site premises
- Government buildings
- Universities
- Sports clubs
- Car parks

## The Connaught Difference

With Connaught, you won't just get the right system to suit all your needs; you'll also get value for money and first class technical support. You can rely on an end-to-end solution from Connaught to deliver the best performance all day, everyday. As the needs of your business grow or change, you can extend this quickly and easily.
